Subject: Retention Study Materials

DSS: No

Kim:

To follow is the list of materials that we will require for the FT-IR equipment for the planned Retention Study:

- 1) Liquid nitrogen (120L, high pressure)
- 2) FT-IR purge generator [from Parker Hannifin Corp., 800-343-0051, ext. 609 - number to sales/service engineer Kirk McKinney], stock # MN 72-52NA
- 3) The FT-IR purge generator will require being plumbed into house compressed air at 60 psi of pressure.

Please let me know if MDS can obtain/provide these. If yes, the cost should be estimated and included in the study specific fee proposal assumedly as pass through expenses.

Please call if questions.

Thanks,
Valerie
